NOTIFICATION OF MARINA SILTATION

May 1, 2018

Dear Boater:

The last dredge in and around the San Leandro Marina (which was a partial dredge to 5.5’ and within the federal channel only) was accomplished in 2009. Subsequent to that dredge, the City has not been able to secure dredge funding from the Army Corps of Engineers and the harbor and federal channel continue to silt up. As a result, ingress and egress to the harbor may be limited at low tide. Additionally, some berths have silted up to the extent that larger boats may be grounded at extreme low tides. Boaters are hereby put on notice that ingress and egress to and berthing of your boat at the San Leandro Marina is at your own risk. Further, the City does not have the capability to provide rescue service to grounded vessels. Please take notice of the tidal depth when planning to enter, leave, or berth at the harbor. Tide books are available free of charge at the Marina Office.

Until further notice, and based on historic survey data, access will increasingly be limited as siltation continues to build up. The most recent bathymetric survey of the shallowest areas, along with historic survey data is attached.

If you have any questions or comments, please contact Delmarie Snodgrass, Marina Manager at (510) 577-3490 or e-mail dsnodgrass@sanleandro.org.

Sincerely,

Debbie Pollart, Public Works Director
City of San Leandro
