Single-Use Plastic Straws

Help reduce the impact of single-use plastic straws

Skip the straw to protect the environment and reduce litter. The State of California passed AB 1884, which prohibits full service restaurants from distributing single-use plastic straws, except upon customer request. The City of San Leandro recommends that all local businesses provide straws only upon customer request.

Americans discard 500 million single-use plastic straws per day. Plastic debris interferes with wildlife habitats and endangers marine life through entanglement and ingestion.

Help stop the harsh environmental impacts of plastic pollution by avoiding single-use plastic straws.
